IT Security Excercise MOOC

Finding security problems in modern websites

Go to the website

https://securitylab.sit.tu-darmstadt.de/tu9/

And login with your TU9 MOOC credentials. You might need to add the course

"IT Sicherheit - TU9"

After you have done that, several challenges are presented to you. You should try to solve as many of them as possible. For solving the challenges, you might need to install additional software such as a cookie editor for your browser. You are free to use any kind of additional literature you like. For example

https://www.owasp.org/

might be very helpful for the exercise. Once you have completed as many tasks as you could, take a screenshot of the website showing your completed tasks and post it in the forum.
